Permeable Paving Maintenance Plan

Year 1 and Beyond

- 1) Inspect the permeable paving surface following rainfall events and identify any areas which are not readily receiving stormwater. Inspect the outlet following rain events to verify the system is draining properly. Promptly address any issues.
- 2) Conduct regular leaf blowing to remove any leaves or debris before it breaks up and infiltrates the permeable paving system.
- 3) Promptly remove any mud or dirt from the paving surface.
- 4) The permeable paving needs to be inspected at least once a month to ensure that there has been no vehicular damage or damage from a major storm event.
- 5) Conduct annual inspections of the permeable paving system. Evaluate accumulation of debris, stability of the paving surface, and condition of the overall system. Maintain records of these annual inspections and any completed repairs.
